**Keith Morton Security Selects Gabkotech Innovations to Digitally Transform and Automate Security Processes and Workflow**

*Incorporating advanced mobile, cloud and IoT sensor technologies, Gabkotech's award-winning iREP Security application helps Keith Morton Security automate its security workforce and increase overall productivity*

**SINGAPORE – September 16, 2020 – [Gabkotech Innovations](#)**, today announced that [Keith Morton Security \(KMS\)](#), a licensed security service provider in Singapore, has successfully implemented its [iREP Security](#) mobile application and monitoring system for digitalising and automating security processes and workflow, empowering KMS to achieve overall productivity increase with a sharp competitive edge that is needed to thrive in today's digital economy.

Keith Morton Security (KMS) is one of the leading security service providers in Singapore that offers physical access and homeland security services to protect residential premises, commercial buildings, retail malls, public hospitals and construction sites. Its team of reliable and professional unarmed security and duty officers are committed to surpassing customer expectations and delivering the highest service standard in the industry.

Prior to implementing Gabkotech's iREP Security, assigned on-duty security officers had to rely on the traditional book and writing method to record visitor information and submit reports manually by hand. Extensive time was spent in filling out security logbooks, and human error, such as inadequacy of information recorded and illegible handwriting, soon caused systemic issues to the security processes and workflow. Storage and retrieval of physical records was another major problem KMS had to grapple with.

To help KMS go paperless and resolve the issues it was facing, the iREP Security mobile reporting, tracking and monitoring system was deployed to enable security officers file reports with ease so that they could focus their time and attention on monitoring and surveillance tasks.

Incorporating advanced mobile, cloud and IoT sensor technologies including near-field communication (NFC), global positioning system (GPS) tracking and live image capture feature, iREP Security lets security officers take images and file reports easily with its pre-filled descriptions and checking boxes, and submit them to the management in real-time for review.

Patrolling officers utilise the NFC feature of iREP Security to clock in at designated checkpoints with just a swipe. Any missed checkpoint can also be detected without having to detour back to the guardroom to pinpoint the location.

For visitor management, security officers can simply scan and capture essential security information of visitors through their identity cards using iREP Security, and verify the identities again upon exit.

“Besides providing us with a high-performance and scalable solution to help automate our security workflow, KMS has also benefitted immensely from the excellent standard of service provided by the Gabkotech team of technical and support professionals, as we have a shortage of digital talent and resources internally,” said William Adam Morton, director, Keith Morton Security. “As a small and medium-sized enterprise (SME) in Singapore, we appreciate and value the transformative power of technology to our business, Gabkotech Innovations is our partner of choice in bridging the digital divide and empowering us to stay competitive and relevant in today’s disruptive environment.”

Gabkotech Innovations attained the ISO9001:2015 certification this year in recognition of its successful implementation of a quality management system across the organisation. The accreditation reaffirms Gabkotech’s relentless commitment to providing not only products and services that consistently meet customer needs and regulatory compliance, but also to enhancing customer satisfaction constantly through the effective application of its quality management system.

“We are privileged and honoured to be working closely with many SMEs in Singapore and the region to help them reap the strategic benefits of digital transformation, by providing them with not just digital solutions and tools that are customised to their needs, but also our excellent support services to provide regular training to our customers to ensure they maximise the

advantages afforded by our solutions, and stay up to date and savvy with the latest developments in technology,” said Aaron Lee, CEO and founder of Gabkotech Innovations.

According to a [study conducted by IDC](#), SMEs in Singapore that are digitally mature enjoy twice as many benefits in terms of revenue and productivity, compared to SMEs that have an indifferent approach to digitalisation. Higher revenue and productivity gains from digital transformation by SMEs could add as much as US\$24 billion to Singapore’s gross domestic product (GDP) by 2024.

The study also found that the COVID-19 pandemic has accelerated digitalisation efforts for nearly 70 per cent of SMEs across the Asia Pacific region, while 86 per cent believe digitalisation will help them develop resilience against similar crises.

#### **About Gabkotech Innovations**

Gabkotech Innovations is one of the leading IoT smart building facilities management solutions provider in Singapore, incorporated in 2012. Using IoT sensors that are connected to the cloud and big data which is captured and analysed with Artificial Intelligence (AI), Gabkotech creates a preventive, predictive and prescriptive solution for building facility managers that surpasses local counterparts in the same domain.

**Vision** — Be a number one leading global company for IOT smart building solutions

**Mission** — Making IOT smart building solutions deployment easy

**Values** — Innovative. practical. empathetic

#### **What We Do**

We specialise in developing a one-stop integrated smart building solutions for building management. We provide smart workforce enterprise mobility solutions using IOT sensors with data sitting on cloud and AI infused capability.
